Processing issue?

Hospital
Gives patient names with orders but may be patients from "last" month
We now process and label bags with these names.....we assume that they tear open bags and remove drugs immediately and place in Pixus machines...etc
We want to now pack as "Bulk" + label with facility name label while still processing patient names into data base.

Do you anticipate any problems?
Should we call each facility and explain change one at a time as we receive and process these orders?.....i'm thinking that we process old way one more time and alert rep to explain that "next" order will be "new" way, but still provide names.
